Akira Flow

What the app already does

Akira Flow is a phone app for Kenyan small shops. It was built first for my own business, Akira Bites, which started as a samosa stall and is now a fast food shop. A shop owner I know asked for the same tool, then an electronics shop. These pages show the working app.

An owner can see today’s sales, costs, and profit, record a cash or M-Pesa sale, watch stock, and ask a simple question such as who owes. The setup screen lets each shop pick its own type, including food, grocery, and electronics.

The pages after this one are the app screens. They are here so you can see the product that the three-month shop trial would put in front of real owners.

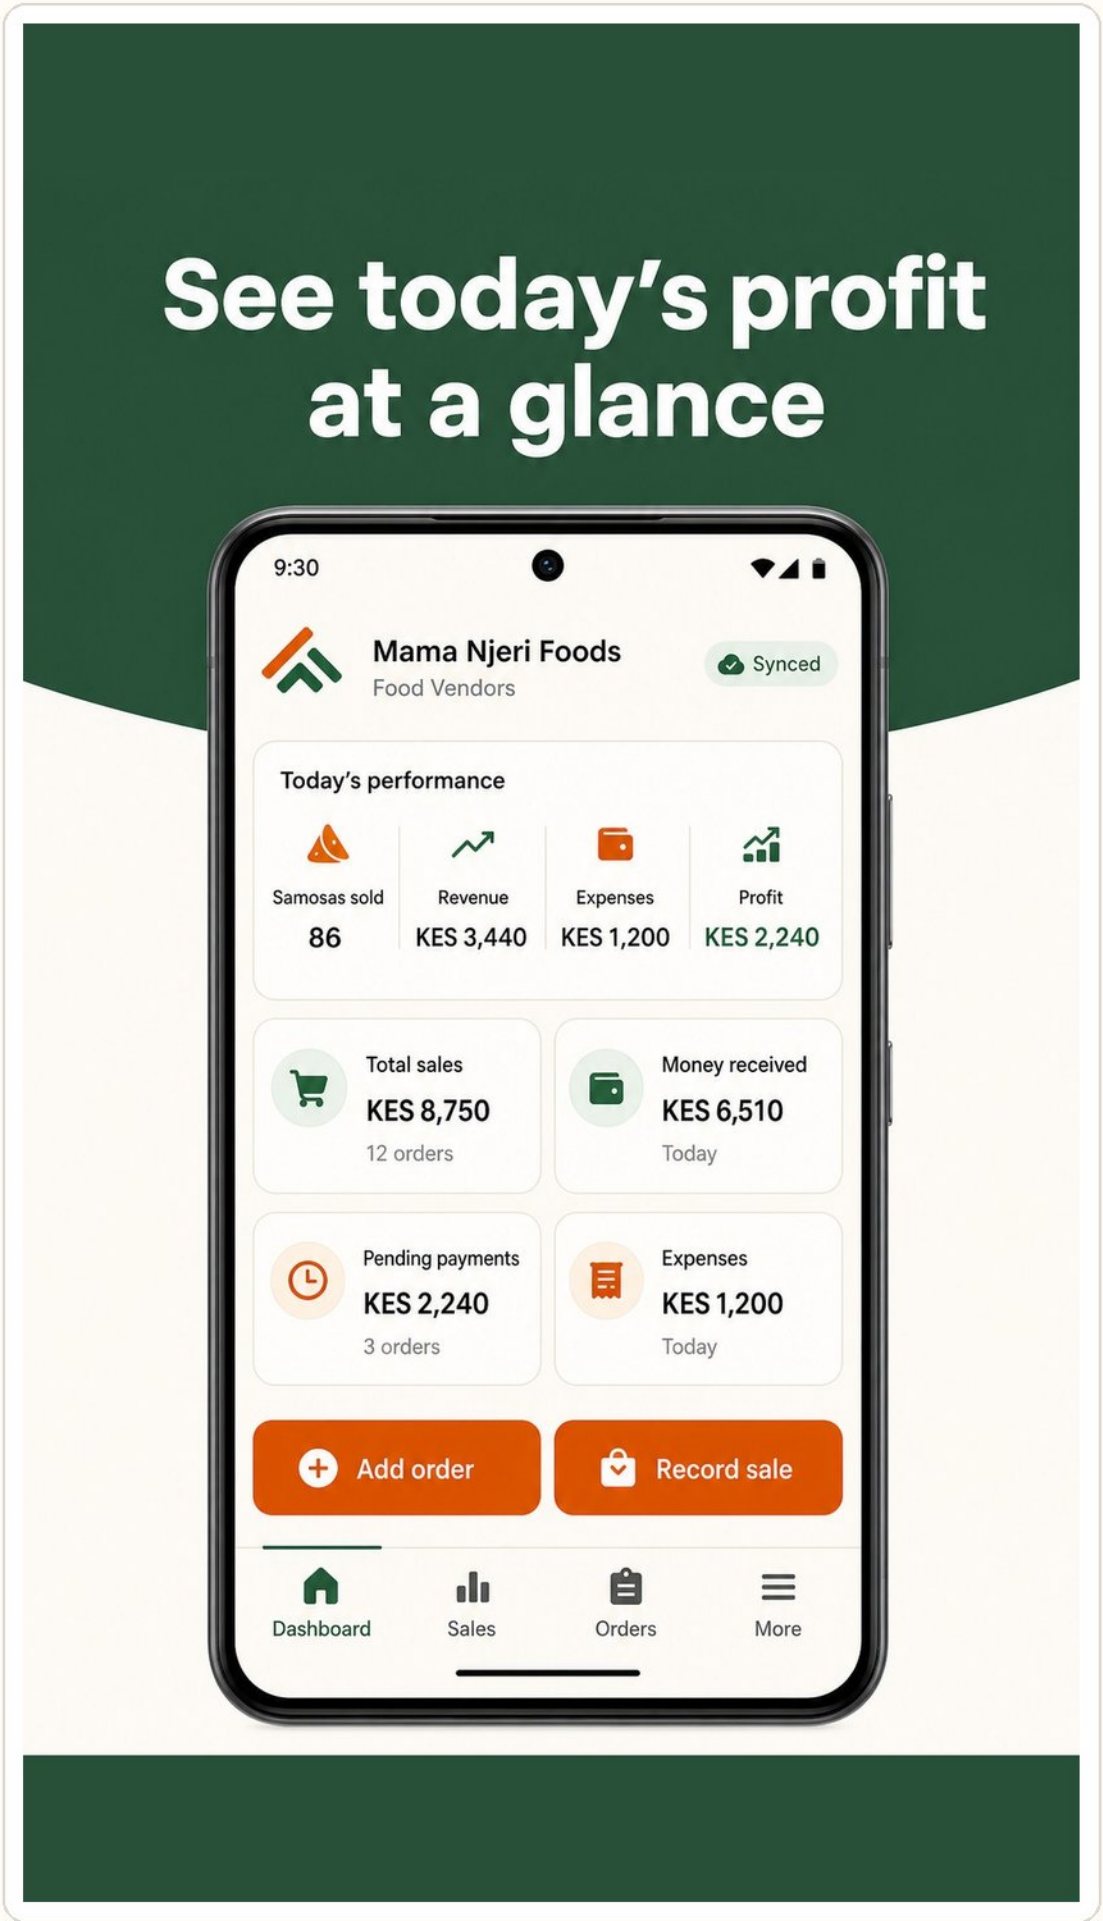

In this file

1. Today’s profit on the home screen
2. A sale with cash or M-Pesa
3. Stock and a low-stock warning
4. A question to the in-app assistant
5. Shop types, including electronics

Akira Flow

Today’s profit on one screen

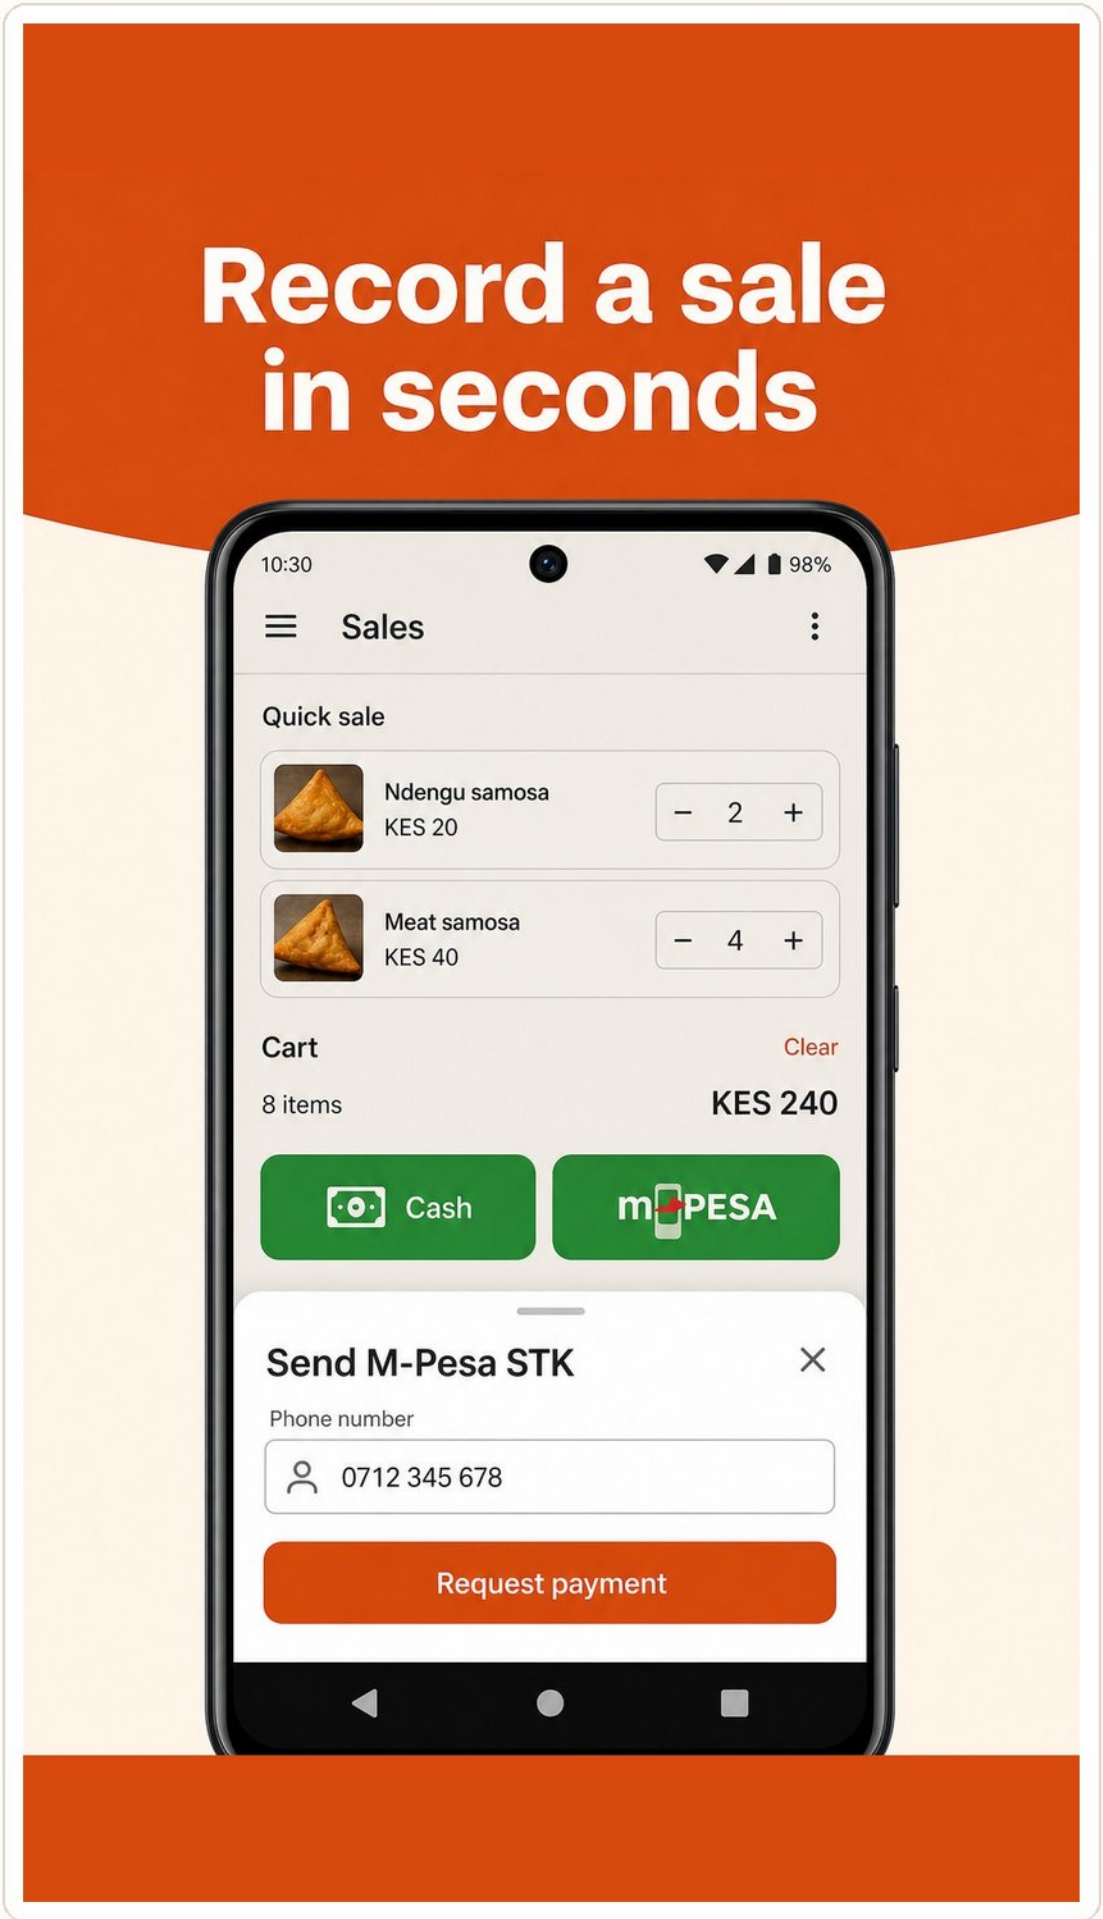

Sales, expenses, and profit for the day, in Kenyan shillings. This is the screen an owner checks before closing.

Akira Flow

A sale in cash or M-Pesa

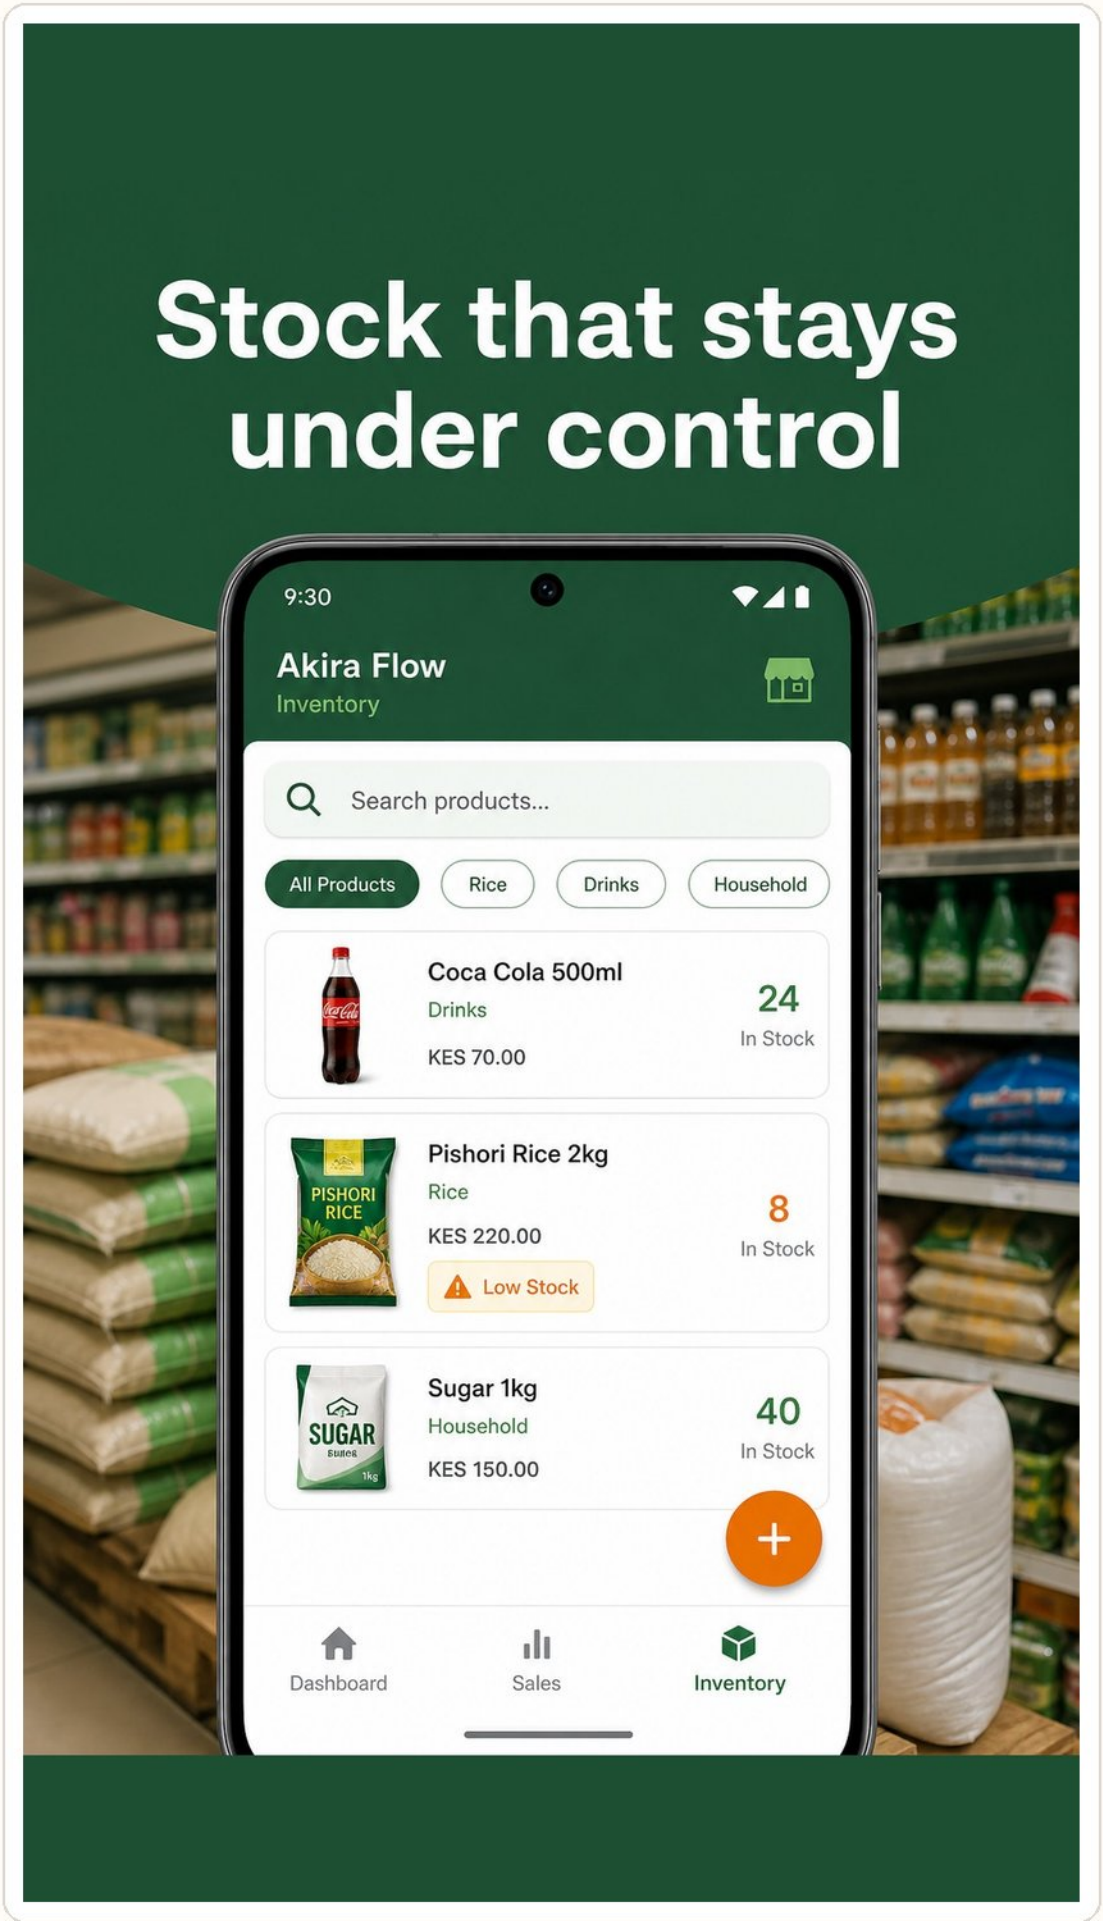

The first version was built around samosa sales at Akira Bites. The same screen now sends a Lipa na M-Pesa prompt to the customer’s phone.

Akira Flow

Stock, with a low-stock warning

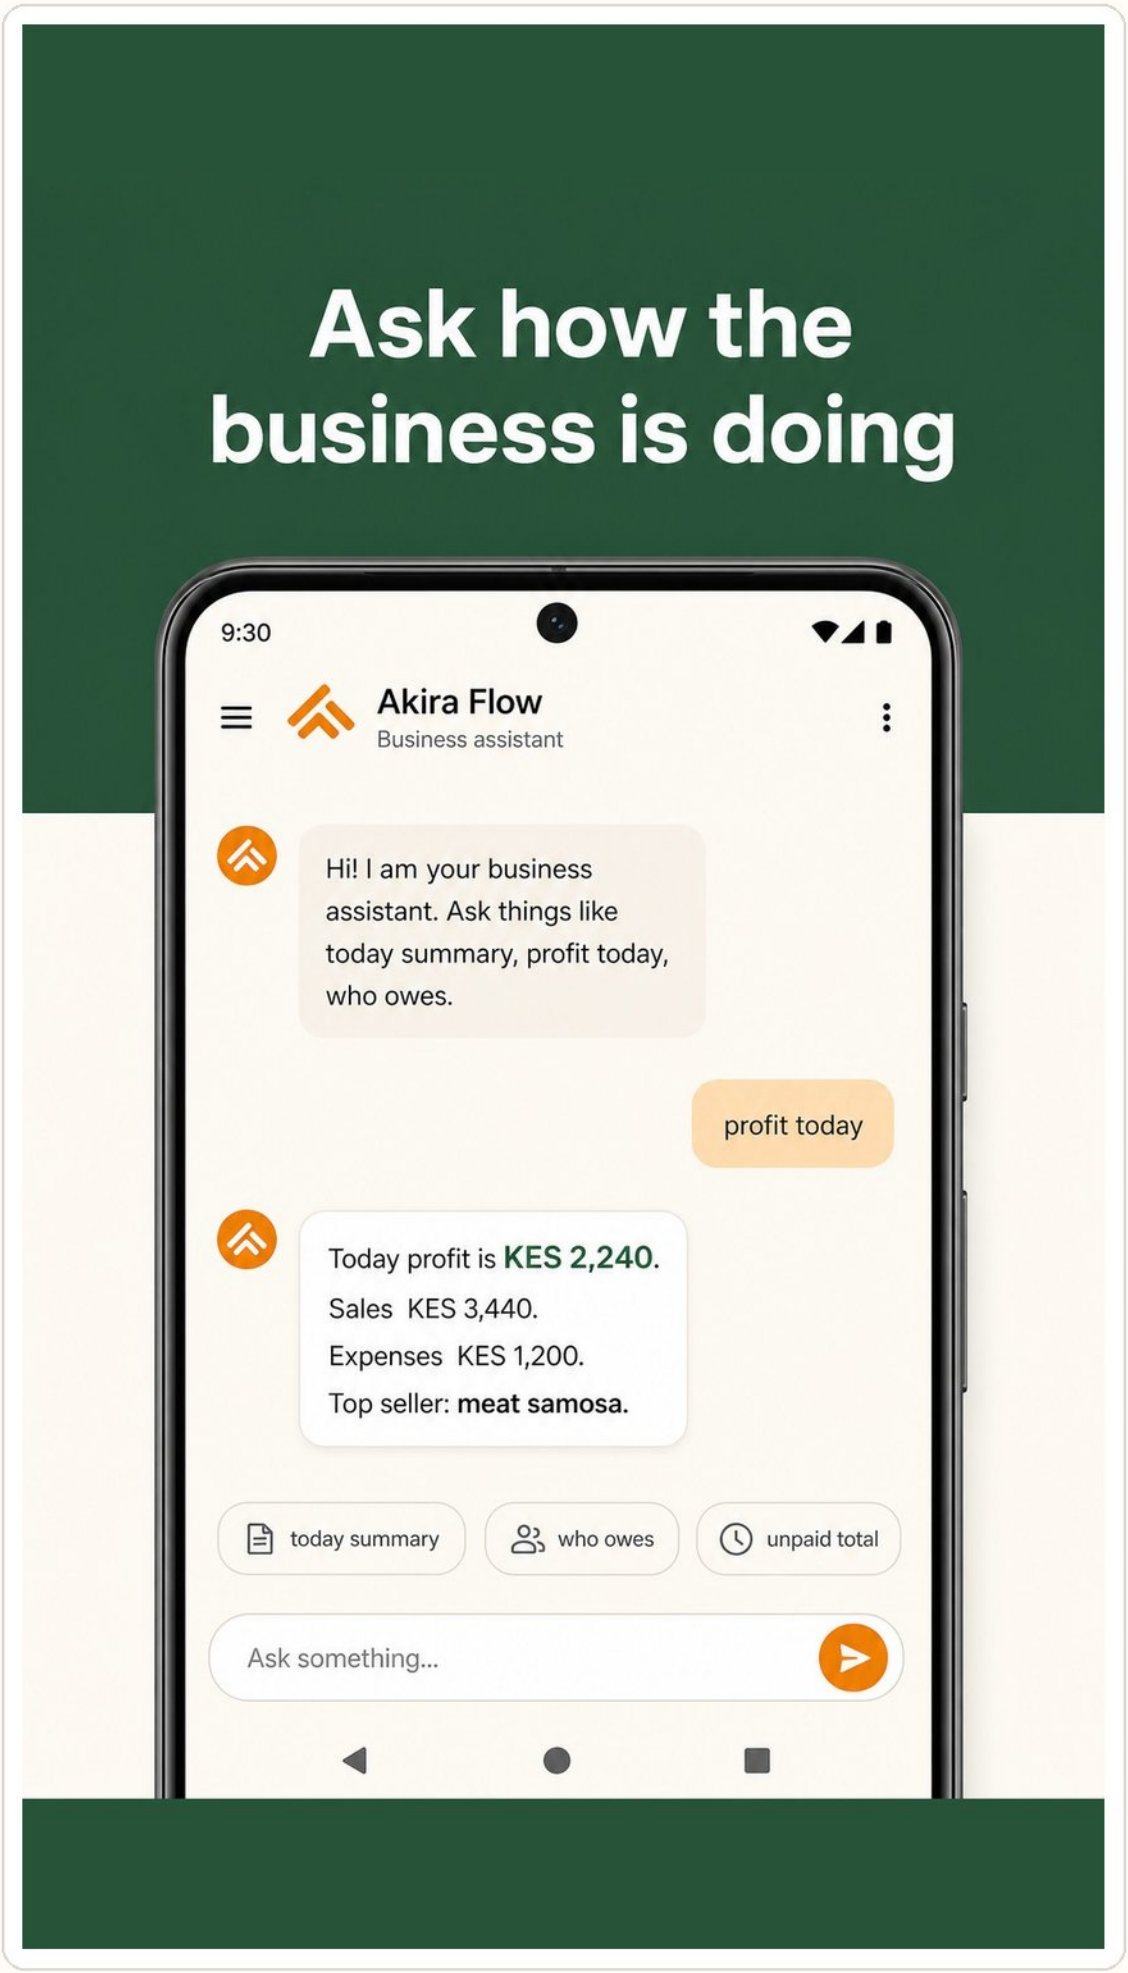

Products, prices, and what is running out. This is the screen a kiosk or electronics shop uses to keep count.

Akira Flow

Ask how the day went

The owner can ask for today’s profit or who still owes, without opening a report.

Akira Flow

One app, a setup for each shop

Food was the start. Electronics, hardware, pharmacies, and other counters each get their own setup. The trial would test this with about 20 real shops.
